FISH-PASSING FACILITY FOR RIVER SECTIONS SHALLOWED AS A RESULT OF DRAWING-OFF HPS OPERATION

Areas of Application

The facility is to be used for enabling fish passage to spawning sites in the case of river shallowing as a result of operation of small drawing-off hydropower station and the appearance of obstacles to fish migration, like rapids and small waterfalls

Specification

The fish ladder is a wooden tray narrowing downward, with transverse partitions located alternately on each side. The ladders are installed in the places critical for fish passage (rapids or drops) with a maximal height of fish elevation of up to 2 m

Advantages

The fish ladder can be installed in almost any place of river without disrupting the natural stream bed; it is cheap, reusable, environment friendly, does not require any heavy equipment for installation

Stage of Development. Suggestions for Commercialization

IRL3, TRL4

Patent sale; consultation services regarding the installation of fish ladders and control of their effectiveness are provided

IPR Protection

IPR3

River shallowed as a result of drawing off

Spawning run of trout
