

INFORMATION SYSTEM FOR INTELLECTUAL SUPPORT OF MEDICAL SERVICES PROVISION

Flowchart of operation of the information system for intellectual support of medical services

Areas of Application

The system aims at providing information support of decision-making in diagnosis, choice of treatment option, etc. at healthcare facilities

Specification

The system is based on creating information applications for mobile devices and telemedicine tools in the diagnosis and choice of treatment option with the use of real-time digital medical data

Stage of Development. Suggestions for Commercialization

IRL3, TRL4
The system with options of author's installation and maintenance is proposed to developers of information systems for medical institutions

Advantages

Unlike the existing means of diagnosis based on expert judgment, this one uses methods of digital images and medical data analysis

IPR Protection

IPR2
