# TECHNOLOGY FOR PERSON IDENTIFICATION BY FACIAL IMAGE

Areas of Application

The technology is to be used in access control systems of premises, computers, etc., in criminalistics, border control, and biometric identification systems, as well as for the search of person's images in databases and networks

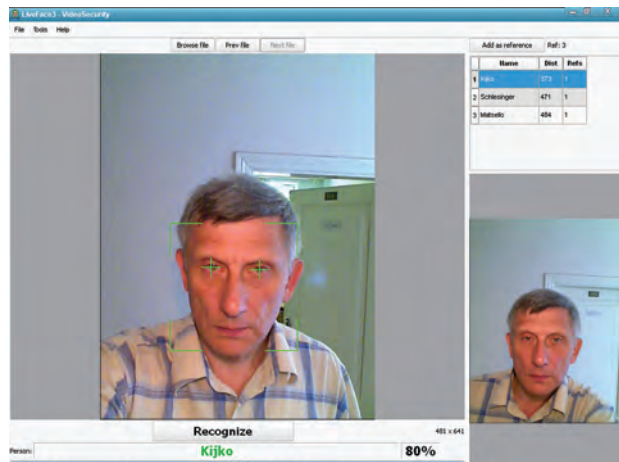

Specification

The technology has been tested on international facial images databases and has proved itself to be as reliable as the best known analogs

Advantages

Due to the use of original method for reconstruction of 3D human face model by series of images, this technology shows a high reliability of recognition without expensive equipment like laser range meters or special lightning involved

Example of personal identification by facial image

Stage of Development. Suggestions for Commercialization

IRL8, TRL7
Software installation, maintenance, and staff training, upon request
